Identifying Cell Types through SERS and Machine Learning

09/2022 – 05/2023

Researcher, Supervisor: Prof. Bo YAO

- Utilized Confocal Surface Enhanced Raman Spectroscopy (SERS) to acquire 3082 spectra of 5 cell lines.
- Employed a random forest algorithm via Python to identify these spectra.
- Achieved an overall accuracy of 93.2% to distinguish 5 cell lines.
- Data not published. This was a training program for machine learning.
